EMBEDDED C PROGRAM TO DISPLAY “HELLO WORLD” MESSAGE

AIM:

To write an Embedded C program to display “HELLO WORLD” message using Keil software.

The screenshot displays the Keil uVision IDE interface. The main window shows a C program file named 'Exp_11.c' with the following code:

```
1 #include <reg51.h>
2 #include <stdio.h>
3
4 void main(void)
5 {
6     // Configure UART / Serial Communication
7     SCON = 0x50; // Mode 1: 8-bit UART, enable receiver
8     TMOD = 0x20; // Timer 1, Mode 2: 8-bit auto-reload
9     TH1 = 0xFD; // Set reload value for 9600 baud rate (11.0592 MHz crystal)
10    TR1 = 1; // Start Timer 1
11    TI = 1; // Set Transmit Interrupt flag to allow initial printf()
12
13    while (1)
14    {
15        printf("Hello World ! \n");
16    }
17 }
```

Below the code editor, the 'UART #1' window shows the output of the program, displaying 'Hello World !' five times on separate lines. The status bar at the bottom indicates 'imit: 2K' and 'Examples\\HELLO\\Objects\\EXP11'.

RESULT:

Thus the program has been successfully verified and executed.
